---

Jhana, here are the recommendations that Dr. Milton would like to share with Unified Command regarding confirmation sampling:

- 1) Pull a sample in each room of the house, at 12 inches off the floor as close to the floor vents as possible. Additional samples to be pulled in the HVAC closet.
- 2) Samples must be pulled only when ambient air is 70 degree F or greater.

Please let me know if you have additional questions or concerns.

Thanks

Shaun
